

TRIPLICATOR

Create multiple copies of your data at the same time.

Triplicator makes your job easier. When you need to copy your critical data to multiple drives, Triplicator saves you time and energy by doing the copies in a single action. When you copy data to the Triplicator volume, identical data will be copied to all the target drives. Perfect for any production workflow when you need on-site backups of your valuable data. The first product from the new **Glyph Production Technologies**.

TRIPLICATOR

Connect two or three drives, push button, make three copies simultaneously.

It's easy. Here's how it works:

1. Connect two or three drives to Triplicator's eSATA device ports
2. Connect the Triplicator to your computer via FireWire 800, USB or eSATA
3. Power on the drives and Triplicator - the LED tells you how many drives are attached
4. Copy data - the destination is seen as one drive through the Triplicator

That's all there is to it! You've sent the same data to up to three drives, without having to do separate copies, and you're ready use the drives as individual originals for editing, backup and archiving.

Host computer connectivity: (2) FireWire 800, USB 2.0, eSATA

Target drive connectivity: (3) eSATA

Included cables: (4) eSATA, FireWire 800

Rack-mountable with an optional rack kit
